Chapter 1

Introduction to the Training Establishment

Figure 1.1: Official logo of Singapore University of Technology and Design

Chapter 2

Training Experiences

2.0.1 Git Version Control System

Table 2.1: Basic Git commands used during training period[**?**]

Command	Explanation
git init	Initializes a git repository, creates the initial '.git' directory in a new or in an existing project.
git clone	Makes a Git repository copy from a remote source.
git add	Adds files changes in the working directory to the index.
git rm	Removes files from the index and working directory so they will not be tracked.
git commit	Takes all of the changes written in the index, creates a new commit,object pointing to it and sets the branch to point to that new commit.
git push	Pushes all the modified local objects to the remote repository and advances its branches.
git pull	Fetches the files from the remote repository and merges it with the local one.
